

Growing Silver-Gold Discovery In Arizona

TSX-V: AZT | OTCQB: AZZTF

Aztec Minerals Corp. (AZT: TSXV) (AZZTF: OTCQB) is a Vancouver-based mineral exploration company focused on a growing oxide Gold-Silver project in Southeastern Arizona, as well as an emerging porphyry gold discovery in Sonora, Mexico

Two Prospective Projects

- Tombstone gold-silver & project in Arizona, USA
- Cervantes porphyry gold project in Sonora, Mexico

Recently Drilled Broad High-Grade Gold-Silver Zones at Tombstone, AZ

- Multiple drilled broad and high-grade gold-silver zones at Tombstone (5.72 gpt AuEq over 57.8m, 3.4 gpt AuEq over 65.5m, 6.3 gpt AuEq over 32.0m)

Drilling Expansion of New Gold Discovery

- Cervantes gold porphyry discovery, every drill hole to date has intersected strong mineralization over substantial widths (1.5 gpt Au over 137m)

Tombstone JV (85% AZT)

Oxide Gold-Silver CRD Project

- Well located property, primarily patented land, covers historic Tombstone silver mining district, great infrastructure, local town, road access, full services, water, power
- Historic silver district produced 32 million oz Ag from 1878-1939, high grade, oxidized, silver-gold-lead-zinc-copper vein and CRD deposits, small open pit heap leach production in 1980's
- 2020-2026 drill programs Intersected extensive gold-silver mineralization along the North-trending Contention Structure; Most holes bottomed in mineralization, still open for expansion
- Historic open-pit heap leach mine at Contention pit for oxide gold-silver mineralization

DRILL HIGHLIGHTS

TR25-17	5.16 gpt Au and 39.12 gpt Ag (5.72 gpt AuEq) over 57.8m
TR21-22	2.44 gpt Au and 66.56 gpt Ag (3.39 gpt AuEq) over 65.5m
TR21-10	1.39 gpt Au and 56.40 gpt Ag (2.20 gpt AuEq) over 96.0m
TC23-01	0.58 gpt Au and 72.19 gpt Ag (1.63 AuEq) over 125.0m
TR21-03	5.71 gpt Au and 40.54 gpt Ag (6.28 gpt AuEq) over 32.0m

Cervantes Project (100% AZT)

(100% AZT) Porphyry Gold (+/-Copper) Project

- Large well-located property (3,649 hectares) with good infrastructure, road access, local town, all private land, water wells on property, grid power nearby
- Eleven prospective mineralized zones related to high level porphyries and breccias, at intersection of NW porphyry copper and EW epithermal gold trends
- Recent Drill program, California target step-out holes expanded the primary area of gold mineralization
- Drilling Highlights, To-date, every hole but one drilled at California has intersected near surface, oxidized gold mineralization with minor copper oxides
- Excellent gold recoveries from metallurgical tests on drill core from California zone, oxide gold recoveries range from 75% to 87%
- California zone wide open laterally and to depth, IP anomaly strengthens and broadens to 500m depth over an area 1100m by 1200m

DRILL HIGHLIGHTS

- 136.8m @ 1.49 gpt gold incl 51.7 @ 3.42 gpt Au, in 22CAL005
- 165.0m @ 1.00 gpt gold incl 24.4 @ 4.25 gpt Au, in 22CAL004
- 94.0m @ 1.04 gpt gold incl 54.9 @ 1.56 gpt Au, in 22CAL001
- 160m @ 0.77 gpt gold incl 80m @ 1.04 gpt Au, 0.11% Cu in 18CER010

Share Structure

SHARES ISSUED	188.8 M
FULLY DILUTED	235.8 M
INSIDER HOLDINGS	27.0 M (14%)
CLOSELY HELD	68.8 M (36%)
WORKING CAPITAL	C\$5.5 M
MARKET CAP	C\$47.0 M
